

Florida Injection Service Bulletin

Date: 02/10/2022

Application: Applies to all diesel engines

Subject: Fuel system lubrication

Text: Diesel fuel no longer has lubricity enhancers incorporated into it. If you add a lubricity enhancer manually at fill-up, you should see a substantial increase in component life.

Florida Injection recommends Stanadyne products for this. Stanadyne Diesel Performance Formula 38566 is a good option, there are other products in the Stanadyne line as well.

As an alternate, customers report great success with using GM transmission fluid at the rate of 1 quart to 30 gallons fuel. ACDelco GM Original Equipment 10-9395 Dexron VI Automatic Transmission Fluid is a good choice for this. Do not use synthetic fluid.
